

Instructor: Delia Gârbacea

Office Location : F51c
Phone : (408) 864-8308
Email : GarbaceaDelia@DeAnza.edu

Office Hours : MW 3:25 – 4:15 p.m. AT203/203B
 TTh 3:25 – 4:15 p.m. AT311
Class meetings: Mon, Wed 1:30 – 3:20p.m., Lecture AT205

The instructor will be available **Online:** Wed, 10:45 – noon.

Course description: This course is an introduction to computer programming. Its primary objective is to teach problem solving using the C++ programming language. Emphasis will be placed on structured procedural programming with an introduction to object-oriented programming. This course is designed primarily for computer science and related transfer majors.

Text required: “Starting Out with C++ From Control Structures through Objects” by Tony Gaddis, eighth edition, 2015, Pearson Education, Inc.

Other resources: CodeLab, a web-based learning system. <http://www.turingscraft.com>
 SECTION ACCESS CODE: **DEAN-22362-FRTY-27**

Attendance policy: This 4.5 Units course consists of 4 lecture hours (4x50min = 200min) and 1.5 lab hours (75min) per week. You are expected to attend all lecture sessions and complete all online work. If you must be absent from class, arrange with another student to share class notes for that session. You should plan on spending approximately another 12 to 15 hours per week to study and do your homework. Remember, there is no such thing as a dumb question: you want to understand before you get lost. In addition, please be assured that I’m ready to assist you in any way possible as you meet the challenges ahead. If you wish to withdraw from class, it is your responsibility to do so. An unauthorized withdrawal from class without following official procedures will result in you being assigned a grade of "F" (or "NC" if you have selected the Credit /No Credit option).

Communication: Ask questions in class and/or during office hours. To spend our time in a more efficient way please post homework related questions on Catalyst. There will be a discussion forum for each assignment/chapter. Post answers to other students’ questions. Email me if needed. Please begin each email’s subject with “CIS22A: <add your subject here>”.

Academic Support: Remember, there is no such thing as a dumb question: you want to understand before you get lost. In addition, please be assured that I’m ready to assist you in any way possible as you meet the challenges ahead.

- There are lab assistants and volunteer tutors available in the CIS laboratory: <http://deanza.edu/cis/tutoring.html>.
- Also, the Student Success Center provides free academic support: <https://www.deanza.edu/studentssuccess/>

Student Learning Outcomes: By the end of the course, students will:

- Read, analyze and explain introductory level C++ programs.
- Design solutions for introductory level problems using appropriate design methodology incorporating elementary programming constructs.
- Create algorithms, code, document, debug, and test introductory level C++ programs.

Course objectives: Upon completion of the course, students will:

- Illustrate the difference between procedural and object oriented programming.
- Demonstrate the software life-cycle steps including design, development, styles, documentation, testing, and maintenance in the creation of program.
- Use the C++ environment in the development and testing of programs.
- Illustrate declaring identifiers of different data types.
- Use data types to declare variables in C++ programs.
- Apply input and output functions to read data using keyboard and output to screen.
- Use expressions, statements and operators to construct program building blocks that compute values.
- Apply control structures to break up flow of program execution and conditionally execute blocks of code.
- Implement functions/methods in programs for clarity and efficiency in code development.
- Develop programs using functions that enable input and output with text files.
- Demonstrate usage of arrays to process variety of data problems.

Scholarly conduct: In order to be successful in this class you will have to make a commitment to studying, reading the text, doing your homework, writing your lab assignments, attending class, and taking notes. Worthwhile contribution and regular attendance can positively affect the grades. You are expected to read the relevant pages of the textbook before coming to class. The course covers quite a bit of material, not all of which will be reviewed during class. The lectures and class activities are designed to build upon your preparation, not to replace it. Class participation makes the class interactive and much more valuable. You are expected to do your own work. Cheating or plagiarism in any form will not be tolerated. Copying or cheating during a test will result in a zero being assigned for that test and may result in a failing grade for the entire course. Any copied assignments will result in a zero grade for all parties, and may result in a failing grade for the entire course. It may also result in dismissal from class, college disciplinary action, and/or notation in their permanent records. The Business Division Dean will also be notified by letter. Please check the current Schedule of Classes to learn more about academic integrity, other policies, and Student Standards of Conduct (<http://www.deanza.edu/schedule/>).

Reading assignments and recommended Review Questions, Exercises, and Problems: The exercises and problems are not to be run on the computer (unless you wish to). The purpose of these exercises and problems is to help clarify the material for you as we proceed and to prepare you for tests, therefore, although you do not have to turn them in, you are strongly encouraged to solve them.

Tests: There will be two midterm exams (60min, 100 points) and a comprehensive final (120min, 100 points). All tests are closed book, closed notes. You may use one 8 ½ x 11 inch hand written notes sheet. Test dates are shown on the calendar. Final exam papers will be retained for a period of 90 days from the exam date. The final exam will be similar to the midterm exams, emphasizing the material learned after the second midterm but covering the rest of the quarter as well.

Class and online assignments: There will be given between 12 to 24 assignments to be completed in class or on line, such as group work, quizzes, etc. They are open book, open notes. There is no make up for any such assignment. These are pass/no pass type of assignments.

Programming assignments (homework): You will be given 9 programming assignments (100 points each). They are to be run using the computer.

- 2 points will be deducted for each day an assignment is late.
- No assignment will be accepted more than one week after the due date, unless there's an exceptional situation (email me or come and talk to me, preferable in advance).
- Partial credit will be given for incomplete assignments.
- There is no make up for any assignment.
- All assignments must be uploaded on Catalyst.

Laboratory assignments: CodeLab provides automatic checking, instantly returning diagnostic feedback. Also it keeps track of students' work. You have to solve and submit about 300 hands-on programming exercises for 100 points. First you have to create an account. Remember to submit your solutions EVERY WEEK! Please check the due dates for each section. SECTION ACCESS CODE: **DEAN-22362-FRTY-27**

Extra-credit assignments may occasionally be given throughout the course (up to 9 points).

Grading: To pass the class you have to do the following:

1. complete **80%** of the class assignments
2. avg1 = average of the 9 programming assignments and CodeLab should be **70** or greater
3. avg2 = average of the two midterm exams should be **60** or greater
4. final exam score should be **60** or greater

If all of the above are true, your final grade will be calculated as follows:

$$\text{score} = (\text{avg1} + \text{avg2} + \text{final} + \text{extra credit}) / 3$$

Your grade is based on the score you earn as shown below. Worthwhile contribution and regular attendance can positively affect the grades.

Class Assignments	: 12 - 24	P/NP	[97, 103] → A+
			[93, 97) → A
Midterm Exams	: 2 at 100 pts. each		[90, 93) → A-
	AVERAGE: (100 + 100) / 2 =	100	[87, 90) → B+
			[83, 87) → B
Programming Assignments:	9 at 100 pts. each		[80, 83) → B-
CodeLab Assignments	: 300 at 100 pts. total		[77, 80) → C+
	AVERAGE: (900 + 100) / 9 =	100	[70, 77) → C
			[67, 70) → D+
Final Exam	: 1 at 100 pts.	100	[63, 67) → D
Extra Credit	:	9	[60, 63) → D-
	SCORE: (100 + 100 + 100 + 9) / 3 =	103	[0, 60) → F

Tentative Schedule

	Chapters	Mon	Tue	Wed	Thu	Fri	Important Dates <i>All dates are enforced!</i>
JAN Week 1	Ch 1: Intro to Computers & Progr Ch 2: Intro to C++	4	5	6 Hw 0	7	8 Code Lab	Saturday, Jan. 9 Last day to drop for a refund for out-of-state or foreign students
Week 2	Ch 2: Intro to C++ Ch 3: Expressions & I/O	11	12	13 Hw 1	14	15 Code Lab	Saturday, Jan. 16 Last day to add quarter-length classes, drop for refund Sunday, Jan. 17 Last day to drop a class with no record of grade
Week 3	Ch 3: Expressions & I/O	18 HOLIDAY: Martin Luther King	19	20 Hw 2	21	22 Code Lab	
Week 4	Ch 4: Decisions	25	26	27 Exam 1	28	29 Code Lab	Friday, Jan. 29 Last day to request pass/no pass grade
FEB Week 5	Ch 4: Decisions Ch 5: Loops and Files	1	2	3 Hw 3	4	5 Code Lab	
Week 6	Ch 5: Loops and Files	8	9	10 Hw 4	11	12 Code Lab	
Week 7	Ch 6: Functions	15 HOLIDAY: Presidents' Day	16	17 Hw 5	18	19 Code Lab	
Week 8	Ch 6: Functions	22	23	24 Exam 2	25	26 Code Lab	Friday, Feb. 26 Last day to drop with a "W"
MAR Week 9	Ch 7: Arrays	29	1	2 Hw 6	3	4 Code Lab	
Week 10	Ch 8: Searching and Sorting Arrays	7	8	9 Hw 7	10	11	
Week 11	Numbering Systems REVIEW	14	15	16 Hw 8	17	18 Code Lab	
Week 12	Final Exam	21	22	23 Final EXAM 1:45-3:45p.m.	24	25
